Abstract: Scope of this paper is to express the Nijenhius Tensor in various forms in Hyperbolic Hsu-Structure manifold. Firstly Hyperbolic Hsu-Structure manifold has been studied and discussed by Dr. R.S. Mishra [3], [4] and some of the great geometricians have also done work in Nijenhius Tensor in different differentiable manifold structures [5], [6], [7], [9]. In this paper, we have taken even dimensional differentiable manifold $V_n(n=2m)$ of differentiability class $C^\infty$, where we have defined the Nijenhius Tensor in Hyperbolic Hsu-Structure manifold and the decomposition of the Nijenhius Tensor in Hyperbolic Hsu-Structure has been done. And some of its properties have also been discussed. Similarly the decomposition of the associate Nijenhius Tensor and its properties in Hyperbolic Hsu-structure manifold has been discussed.

Keywords: Hyperbolic- Hsu structure manifold, Nijenhius Tensor, HGF-structure.

I. INTRODUCTION

If on an even dimensional manifold $V_n$, $n = 2m$ of differentiability class $C^\infty$, there exists a vector valued real linear function $\phi$, satisfying

\begin{equation}
\phi^a = -a'I_n,
\end{equation}

\begin{equation}
\bar{X} = -a'X, \text{ for arbitrary vector field } X.
\end{equation}

Where $\bar{X} = \phi X$, $0 \leq r \leq n$ and $'a'$ is an integer and $'a'$ is a real or imaginary number. Then \{ $\phi$ \} is said to give to $V_n$ a Hyperbolic- Hsu structure defined by the equations (1.1) and the manifold $V_n$ is called a Hyperbolic- Hsu structure manifold.

The equation (1.1)a gives different structure for different values of $'a'$ and $'r'$.
If $r = 0$, it is an almost complex structure.
If $a = 0$, it is an almost tangent structure.
If $r = \pm 1$ and $a = \pm 1$, it is an almost complex structure.
If $r = \pm 1$ and $a = -1$, it is an almost product structure.
If $r = 2$ then it is a HGF-structure which includes $\pi$-structure for $a \neq 0$, an almost product structure for $a = \pm i$, an almost complex structure for $a = \pm 1$, an almost tangent structure for $a = 0$.

Let the Hyperbolic- Hsu structure be endowed with a metric tensor $g$, such that

\begin{equation}
g(\bar{X}, \bar{Y}) - a'g(X, Y) = 0
\end{equation}

Copyright to IJIRSET www.ijirset.com 6395
Then \( \{ \phi, g \} \) is said to give to \( V_n \) - metric Hyperbolic-Hsu structure and \( V_n \) is called a metric Hyperbolic-Hsu structure manifold.

The curvature tensor \( K \), a vector-valued tri-linear function w.r.t. the connexion \( D \) is given by

\[
K(X, Y, Z) = D_X D_Y Z - D_Y D_X Z - D_{[X,Y]} Z.
\] (1.3)

where

\[
[X, Y] = D_X Y - D_Y X.
\]

II. THE NIJENHIUS TENSOR

**Definition (2.1):** The Nijenhius tensor with respect to \( \phi \) is a vector valued bilinear function \( N \) given by

\[
N(X, Y) = [\phi X, \phi Y] + \phi^2 [X, Y] - \phi [\phi X, Y] - \phi [X, \phi Y].
\] (2.1a)

Or equivalent

\[
N(X, Y) = D_{\phi X} \phi Y - D_{\phi Y} \phi X - a^\tau [X, Y] - \phi D_{\phi X} Y + \phi D_{\phi Y} X - \phi D_X \phi Y + D_{\phi Y} \phi X,
\] (2.2a)

\[
N(X, Y) = D_{\phi X} \phi Y - D_{\phi Y} \phi X - a^\tau [X, Y] - \phi D_{\phi X} Y + \phi D_{\phi Y} X - \phi D_X \phi Y + D_{\phi Y} \phi X,
\] (2.2b)

where \( D \) is Riemannian connexion.

**Theorem (2.1):** In a hyperbolic Hsu-structure manifold, we have

\[
N(X, Y) = -N(Y, X)
\]

\[
N(X, Y) = D_{\phi X} \phi Y - D_{\phi Y} \phi X - a^\tau [X, Y] - \phi D_{\phi X} Y + \phi D_{\phi Y} X - \phi D_X \phi Y + D_{\phi Y} \phi X,
\] (2.2a)

\[
N(X, Y) = -a^\tau D_{\phi Y} X - a^\tau D_{\phi X} Y + a^\tau D_Y \phi X - a^\tau D_X \phi Y - a^\tau D_X \phi X + a^\tau D_Y \phi Y - a^\tau D_X \phi Y - a^\tau D_Y \phi X - a^\tau D_{\phi X} Y + a^\tau D_{\phi Y} X.
\] (2.2b)

From A and B

\[
N(X, Y) = -N(Y, X)
\]

\[
N(X, Y) = -a^\tau D_{\phi Y} X - a^\tau D_{\phi X} Y + a^\tau D_Y \phi X - a^\tau D_X \phi Y - a^\tau D_X \phi X + a^\tau D_Y \phi Y + a^\tau D_{\phi X} Y + a^\tau D_{\phi Y} X.
\] (2.2a)

\[
N(X, Y) = -a^\tau D_{\phi Y} X - a^\tau D_{\phi X} Y + a^\tau D_Y \phi X - a^\tau D_X \phi Y - a^\tau D_X \phi X + a^\tau D_Y \phi Y + a^\tau D_{\phi X} Y + a^\tau D_{\phi Y} X.
\] (2.2b)

\[
N(X, Y) = -a^\tau D_{\phi Y} X - a^\tau D_{\phi X} Y + a^\tau D_Y \phi X - a^\tau D_X \phi Y - a^\tau D_X \phi X + a^\tau D_Y \phi Y - a^\tau D_{\phi X} Y + a^\tau D_{\phi Y} X.
\] (2.2d)

\[
N(X, Y) = -a^\tau N(X, Y)
\]

\[
N(X, Y) = a^{2\tau} D_{\phi Y} X - a^{2\tau} D_{\phi X} Y + a^{2\tau} D_Y \phi X + a^{2\tau} D_X \phi Y - a^{2\tau} D_X \phi X + a^{2\tau} D_Y \phi Y - a^{2\tau} D_{\phi X} Y + a^{2\tau} D_{\phi Y} X.
\] (2.2f)

Consequently

\[
N(X, Y) = -a^\tau N(X, Y) = -\phi N(X, Y) = -\phi N(Y, X).
\] (2.3a)

\[
\phi N(X, Y) = -a^\tau N(X, Y) = a^\tau N(Y, X) = a^\tau N(X, Y).
\] (2.3b)
**Proof:** Interchanging X and Y in equation (2.1b), we get (2.2a), which shows that N is Skew-Symmetric in X and Y. Barring equation (2.1b) and applying structure we get equation (2.2c). Barring X and Y separately in equation (2.1b) and using structure in the two equations and then comparing the resulting equation we get (2.2b). Barring equation (2.2b) throughout and using structure in the resulting equation, we get the equation (2.2d). Barring X and Y in equation (2.1b), using structure and comparing the resulting equation with the equation obtained by multiplying equation (2.1b) by \(a^T\) we get the equation (2.2e), which shows that N is pure in X and Y. Barring equation (2.2e) and using structure, we get the equation (2.2f).

The equation (1.3a) is obtained from the equations (2.2d) and (2.2e). The equation (2.2c) and (2.2f) yield the equation (2.3b).

**Theorem (1.2):** Let us put
\[
P(X, Y) = D_{\phi X} Y - a^T D_X Y + \phi D_Y X + \phi D_{\phi Y} X. \tag{2.4}
\]
Then
\[
P(Y, X) = D_{\phi Y} X - a^T D_Y X + \phi D_X Y + \phi D_{\phi X} Y, \tag{2.5a}
\]
\[
P(\phi X, \phi Y) = -a^T P(X, Y) = a^{2T} D_X Y - a^T D_{\phi X} Y - a^T \phi D_Y X - a^T \phi D_{\phi Y} X, \tag{2.5b}
\]
\[
P(\phi Y, \phi X) = a^T P(Y, X) = a^{2T} D_Y X - a^T D_{\phi Y} X - a^T \phi D_X Y - a^T \phi D_{\phi X} X, \tag{2.5c}
\]
\[
P(\phi Y, \phi X) = -a^T P(Y, X) = a^{2T} D_Y X - a^T D_{\phi Y} X - a^T \phi D_X Y - a^T \phi D_{\phi X} X, \tag{2.5d}
\]
\[
P(\phi Y, \phi X) = a^T P(Y, X) = a^{2T} D_Y X - a^T D_{\phi Y} X - a^T \phi D_X Y + \phi D_{\phi X} Y, \tag{2.5e}
\]
Consequently
\[
P(\phi X, \phi Y) = a^T P(Y, X) = a^{2T} D_Y X - a^T D_{\phi Y} X + a^{2T} D_X Y + a^{2T} D_{\phi X} Y. \tag{2.5f}
\]
\[
P(\phi X, \phi Y) = a^T P(Y, X) = a^{2T} D_Y X - a^T D_{\phi Y} X - a^{2T} D_X Y + a^{2T} D_{\phi X} Y. \tag{2.5g}
\]
Barring equation (2.5a) from equation (2.4), we get
\[
P(Y, X) - P(X, Y) = N(X, Y), \tag{2.6a}
\]
\[
a^{2T} P(X, Y) + \phi P(X, Y) = \phi P(Y, X) - P(X, Y) = \phi N(Y, X), \tag{2.6b}
\]
\[
\phi P(\phi X, \phi Y) = a^{2T} P(Y, X) + \phi P(Y, X) = \phi N(\phi X, \phi Y), \tag{2.6c}
\]
\[
P(\phi X, \phi Y) = a^{2T} P(\phi Y, X) = \phi P(Y, X) + a^T P(Y, X) = \phi N(\phi X, \phi Y), \tag{2.6d}
\]
\[
P(\phi X, \phi Y) = a^{2T} P(Y, X) = \phi P(Y, X) - P(X, Y) = N(\phi X, \phi Y). \tag{2.6e}
\]

**Proof:** Interchanging X and Y in equation (2.4), we get (2.5a). Barring equation (2.4) and (2.5a) throughout or different vectors in it and using structure we get the equation (2.5b), (2.5c), (2.5d), (2.5e), (2.5f), (2.5g), (2.5h) and (2.5i). Again, subtracting equation (2.5a) from equation (2.4), we get
\[
P(Y, X) - P(X, Y) = D_{\phi X} Y - D_{\phi Y} X - a^{2T} D_X Y + a^{2T} D_Y X - \phi D_{\phi X} Y + \phi D_{\phi Y} X. \tag{2.7}
\]
Now using equation (1.1b) in equation (1.7), we get the equation (1.6a). Similarly, we can prove the equations (1.6b), (1.6c), (1.6d) and (1.6e).

**Corollary (1.1):** We have hyperbolic Hsu-structure manifold.
\[
P(\phi Y, \phi X) = \phi P(\phi X, Y), \tag{2.8a}
\]
\[
-a^{2T} P(Y, X) = \phi P(\phi X, Y), \tag{2.8b}
\]
\[
P(Y, X) = \phi P(X, Y), \tag{2.8c}
\]
\[
-a^{2T} P(Y, X) = \phi P(X, Y), \tag{2.8d}
\]
\[
\phi P(Y, X) = P(X, Y). \tag{2.8e}
\]

**Proof:** The statement follows from equation (2.5).

**Theorem (1.3):** Let us put
Q(X,Y) = D_{\phi X}Y + a^r D_r X - \phi D_{\phi X} Y + \phi D_{\phi r} X.

Then

Q(Y,X) = D_{\phi Y}X + a^r D_r Y - \phi D_{\phi Y} X + \phi D_{\phi r} Y. (2.10)

Q(\phi X,\phi Y) = -\phi Q(\phi X,Y) = a^{2r} D_r Y + a^r D_{\phi r} X + a^r D_{\phi Y} Y - a^r D_{\phi Y} X. (2.11a)

\phi Q(\phi X,\phi Y) = a^r Q(\phi X,Y) = a^{2r} D_r X + a^r D_{\phi r} X - a^r D_{\phi X} Y + a^r D_{\phi r} X, (2.11b)

Q(X,\phi Y) = -\phi Q(X,Y) = -a^r D_{\phi Y} X + a^r D_{\phi r} X - a^r D_{\phi X} Y, (2.11c)

Q(\phi Y,\phi X) = -\phi Q(\phi Y,X) = a^{2r} D_r X + a^r D_{\phi r} X - a^r D_{\phi Y} Y. (2.11d)

Q(\phi Y,\phi X) = a^r Q(\phi Y,X) = a^{2r} D_r Y + a^r D_{\phi r} X - a^r D_{\phi X} Y + a^r D_{\phi r} X. (2.11e)

Consequently

Q(\phi Y,\phi X) - a^r Q(X,Y) = a^r Q(Y,X) - Q(\phi Y,\phi X) = N(\phi X,\phi Y) = a^r N(X,Y), (2.12a)
i.e. Q is hybrid X and Y.

Q(\phi X,\phi Y) + Q(X,\phi Y) = -\{Q(\phi Y,\phi X) + Q(Y,\phi Y)\} = N(\phi X,Y) (2.12b)

\phi Q(\phi X,\phi Y) - a^r Q(\phi X,Y) = \{-\{\phi X,\phi Y\} - a^r \phi Y\} = N(\phi X,Y), (2.12c)

\phi Q(\phi X,\phi Y) + a^r Q(\phi Y,X) = \{-\{\phi X,\phi Y\} + Q(Y,\phi Y)\} = N(X,\phi Y). (2.12d)

Proof: Interchanging X and Y in equation (2.9), we get (2.10). Barring equation (2.9) and (2.10) throughout or different vector in it and using structure we get the equation (2.11a), (2.11b), (2.11c), (2.11d), (2.11e), (2.11f), (2.11g) and (2.11h).

Again, subtracting equation (2.11d) from (2.11a), we get

Q(\phi X,\phi Y) - a^r Q(X,Y)
= a^{2r} D_r Y - a^r D_r X - a^r D_{\phi Y} Y + a^r D_{\phi Y} X - a^r D_{\phi X} Y + a^r D_{\phi r} X - a^r D_{\phi r} X. (2.13)

Now, using equation (2.2e) in equation (2.13), we get the equation (2.12a), using the fact that N is pure in X and Y in equation (2.12a), we see that Q is hybrid in X and Y. Similarly, we can prove the remaining equations.

Theorem (1.4): Let us put

M(X,Y) = D_{\phi Y}X - D_{\phi X} Y - a^r D_r X - D_{\phi X} Y, (2.14)

M(X,Y) = D_{\phi X} Y - D_{\phi Y} X - a^r D_r Y - D_{\phi Y} X. (2.15)

M(\phi X,\phi Y) = -\phi M(\phi X,Y) = -a^r D_{\phi r} X + a^r D_\phi Y - a^r D_\phi r X + a^r D_\phi Y + a^r D_{\phi X} Y. (2.16a)

M(\phi X,\phi Y) = a^r M(\phi X,Y) = a^r D_{\phi Y} X + a^r D_{\phi r} Y - a^r D_{\phi Y} X + a^r D_{\phi r} Y. (2.16b)

M(X,\phi Y) = -\phi M(X,\phi Y) = a^r D_{\phi Y} X + a^r D_{\phi Y} X - a^r D_{\phi X} Y + a^r D_{\phi X} Y, (2.16c)

M(\phi Y,\phi X) = a^r M(\phi Y,\phi X) = a^r D_{\phi X} Y + a^r D_{\phi Y} X - a^r D_{\phi x} Y + a^r D_{\phi Y} X, (2.16d)

M(\phi Y,\phi X) = a^r M(\phi Y,\phi X) = a^r D_{\phi X} Y - a^r D_{\phi X} Y + a^r D_{\phi Y} X + a^r D_{\phi Y} X. (2.16e)

M(Y,\phi X) = -\phi M(Y,\phi X) = a^r D_{\phi X} Y + a^r D_{\phi X} Y - a^r D_{\phi Y} X + a^r D_{\phi X} X. (2.16f)

M(\phi Y,\phi X) = a^r M(\phi Y,\phi X) = a^r D_{\phi X} Y - a^r D_{\phi X} Y + a^r D_{\phi Y} X + a^r D_{\phi Y} X, (2.16g)

M(\phi Y,\phi X) = a^r M(\phi Y,\phi X) = a^r D_{\phi X} Y + a^r D_{\phi Y} X - a^r D_{\phi Y} X + a^r D_{\phi X} X. (2.16h)

Consequently

M(\phi X,\phi Y) - a^r M(X,Y) = a^r M(Y,X) - M(\phi Y,\phi X) = N(\phi X,\phi Y) = -a^r N(X,Y), (2.17a)
i.e. M is hybrid X and Y.

M(\phi X,\phi Y) + M(X,\phi Y) = \{-\{M(\phi Y,\phi X) + M(Y,\phi Y)\} = N(X,\phi Y) (2.17b)

\phi M(\phi X,\phi Y) - a^r \phi M(\phi X,Y) = a^r M(\phi X,Y) - \phi M(\phi Y,\phi X) = \phi N(\phi X,\phi Y), (2.17c)

\phi M(\phi X,\phi Y) + a^r \phi M(X,Y) = \{-\{M(\phi Y,\phi X) + M(\phi Y,\phi Y)\} = \phi N(\phi X,Y). (2.17d)

Proof: Interchanging X and Y in equation (2.14), we get (2.15). Barring equation (2.14) and (2.15) throughout or different vector in it and using structure we get the equation (2.16a), (2.16b), (2.16c), (2.16d), (2.16e), (2.16f), (2.16g), (2.16h).
Again, subtracting equation (2.16d) and (2.16e) from equations (2.16a) and (2.16h), we get
\[
\begin{align*}
M(\phi X, \phi Y) - a^r M(X, Y) &= a^r M(Y, X) - M(\phi Y, \phi X) \\
&= a^{2r} D_y Y - a^{2r} D_y X - a^r D_{\phi x} \phi Y + a^r D_{\phi y} \phi X + a^r \phi D_{\phi x} \phi Y - a^r \phi D_{\phi y} \phi X
\end{align*}
\] (2.18)

Now, using equation (1.2e) in equation (1.18), we get the equation (1.17a), using the fact that M is pure in X and Y. Similarly, we can prove the remaining equations.

**Corollary (1.2):** We have in hyperbolic Hsu-structure manifold.
\[
\begin{align*}
M(\phi X, \phi Y) &= -a^r Q(X, Y), \\
M(\phi X, \phi Y) &= Q(X, \phi Y), \\
M(X, \phi Y) &= Q(\phi X, Y), \\
a^r M(X, Y) &= -Q(\phi X, \phi Y), \\
a^r M(Y, X) &= -Q(\phi Y, \phi X), \\
M(\phi Y, \phi X) &= -a^r Q(Y, X), \\
M(Y, \phi X) &= -Q(\phi Y, X), \\
\phi M(Y, X) &= -a^r Q(Y, \phi X).
\end{align*}
\] (2.19)

**Proof:** The statement follows from equations (1.11) and (1.16).

**Corollary (1.3):** We have in hyperbolic Hsu-structure manifold
\[
\begin{align*}
M(X, Y) + Q(X, Y) &= -\{M(Y, X) + Q(Y, X)\} = N(X, Y), \\
M(\phi X, \phi Y) + Q(\phi X, \phi Y) &= -\{M(\phi Y, \phi X) + Q(\phi Y, \phi X)\} = N(\phi X, \phi Y), \\
M(\phi X, \phi Y) + Q(\phi X, \phi Y) &= -\{M(\phi Y, \phi X) - Q(\phi Y, \phi X)\} = N(X, \phi Y), \\
M(\phi Y, \phi X) - Q(\phi X, \phi Y) &= -\{M(\phi X, \phi Y) - Q(\phi X, \phi Y)\} = M(\phi X, \phi Y).
\end{align*}
\] (2.20)

**Proof:** from equation (1.9), (1.10), (1.14) and (1.15), we have
\[
\begin{align*}
M(X, Y) + Q(X, Y) &= -\{M(Y, X) + Q(Y, X)\} \\
&= D_{\phi x} \phi Y - D_{\phi y} \phi X - a^r D_y Y + a^r D_y X - \phi D_{\phi x} \phi Y + \phi D_{\phi y} \phi X - D_{\phi x} \phi Y + \phi D_{\phi y} \phi X.
\end{align*}
\] (2.21)

Now using equation (2.1b) in equation (2.21), we get equation the equation (2.20a). Similarly, we can prove the remaining equations.

**Theorem (1.5):** Let us put
\[
U(X, Y) = a^r D_x X - D_{\phi y} \phi X + \phi D_{\phi y} \phi X + D_{\phi y} \phi X.
\] (2.22)

Then
\[
\begin{align*}
U(Y, X) &= a^r D_x Y - D_{\phi y} \phi Y + \phi D_{\phi y} \phi Y + D_{\phi y} \phi Y, \\
U(\phi X, \phi Y) &= -a^r U(X, Y) = a^r D_{\phi y} X - a^r D_{\phi y} X - a^r \phi \phi_{\phi y} X - a^r \phi \phi_{\phi y} X,
\end{align*}
\] (2.23)

i.e. U is pure in X and Y.
\[
\begin{align*}
U(\phi X, \phi Y) &= U(X, \phi Y) = a^r D_{\phi y} \phi X + a^r D_{\phi y} \phi X - a^r D_{\phi y} X + D_{\phi y} \phi X, \\
\phi U(X, \phi Y) &= \phi U(X, \phi Y) = a^r \phi D_{\phi y} \phi X + a^r \phi D_{\phi y} \phi X + a^r D_{\phi y} X - a^r D_{\phi y} \phi X, \\
\phi U(\phi X, \phi Y) &= \phi U(\phi X, \phi Y) = a^r \phi D_{\phi y} \phi X - a^r \phi D_{\phi y} X + a^r \phi D_{\phi y} \phi X - a^r \phi D_{\phi y} X, \\
\phi U(Y, \phi X) &= -a^r U(Y, X) = a^r D_{\phi x} \phi Y - a^r D_{\phi x} \phi Y - a^r \phi D_{\phi x} \phi Y - a^r \phi D_{\phi x} \phi Y,
\end{align*}
\] (2.24)

i.e. U is pure in Y and X.
\[
\begin{align*}
U(\phi Y, \phi X) &= U(Y, \phi X) = a^r D_{\phi x} \phi Y + a^r D_{\phi x} \phi Y - a^r D_{\phi x} Y + D_{\phi x} \phi Y, \\
\phi U(\phi Y, \phi X) &= \phi U(\phi Y, \phi X) = a^r \phi D_{\phi x} \phi Y + a^r \phi D_{\phi x} \phi Y + a^r D_{\phi x} Y - a^r D_{\phi x} \phi Y, \\
\phi U(Y, \phi X) &= -a^r U(Y, X) = a^r \phi D_{\phi x} \phi Y - a^r \phi D_{\phi x} \phi Y - a^r \phi D_{\phi x} Y + a^r D_{\phi x} \phi Y, \\
\phi U(\phi Y, \phi X) &= -a^r U(\phi Y, \phi X) = a^r \phi D_{\phi x} \phi Y - a^r \phi D_{\phi x} \phi Y - a^r \phi D_{\phi x} Y - a^r D_{\phi x} \phi Y.
\end{align*}
\] (2.24)

Consequently
\[
\begin{align*}
U(X, Y) - U(Y, X) &= N(X, Y), \\
U(\phi X, \phi Y) + a^r U(\phi X, \phi Y) &= N(\phi X, \phi Y), \\
U(\phi X, Y) - U(Y, \phi X) &= N(\phi X, Y).
\end{align*}
\] (2.25)
\[ U(X, \phi Y) - U(Y, \phi X) = N(X, \phi Y), \]  
\[ \phi U (X, Y) + \alpha^r \phi U (Y, X) = \phi N(X, \phi Y), \]  
\[ \phi U (X, Y) - \alpha^r \phi U (Y, \phi X) = \phi N(X, \phi Y). \]  

**Proof:** Interchanging X and Y in equation (2.22), we get (2.23). Barring equation (2.22) and (2.23) throughout or different vector in it and using structure we get the equation (2.24a), (2.24b), (2.24c), (2.24d), (2.24e), (2.24f), (2.24g), (2.24h).

Again, subtracting equation (2.23) and (2.22), we get
\[ U(X, Y) - U(Y, X) = D_{\phi X} Y - D_{\phi Y} X - \alpha^r D_{\phi X} Y + \alpha^r D_{\phi Y} X + \phi D_{\phi Y} X - \phi D_{\phi Y} X + \phi D_{\phi Y} X. \]  
(2.26)

Now, using equation (2.1b) in equation (2.26), we get the equation (2.25a). Similarly, we can prove the remaining equations.

**Theorem (1.6):** Let us put
\[ J(X, Y) = D_{\phi X} Y - \phi D_{\phi Y} X + \phi D_{\phi X} Y - \phi D_{\phi X} Y. \]  
Then
\[ J(X, Y) = -J(Y, X) = D_{\phi X} Y - \phi D_{\phi Y} X + \phi D_{\phi X} Y - \phi D_{\phi X} Y, \]  
(2.27a)

is Skew-Symmetric in X and Y.

\[ J(\phi X, \phi Y) = -J(\phi Y, \phi X) = a^{2r} D_{\phi Y} X - a^{2r} D_{\phi X} Y - a^{r} \phi D_{\phi Y} X + a^{r} \phi D_{\phi Y} X, \]  
(2.27b)

\[ \phi J(X, Y) = -\phi J(Y, X) = a^{2r} D_{\phi Y} X - a^{2r} D_{\phi X} Y - a^{2r} D_{\phi Y} X + a^{2r} D_{\phi X} Y, \]  
(2.27c)

\[ J(X, Y) = -J(Y, X) = -a^{r} \phi D_{\phi X} Y + a^{r} \phi D_{\phi Y} X + a^{r} \phi D_{\phi Y} X - a^{r} \phi D_{\phi X} Y, \]  
(2.27d)

\[ \phi J(\phi X, \phi Y) = \phi J(\phi Y, \phi X) = -a^{r} \phi D_{\phi X} Y - a^{r} \phi D_{\phi Y} X + a^{r} \phi D_{\phi Y} X - a^{r} \phi D_{\phi Y} X. \]  
(2.27e)

Theorem (1.7): Let us put
\[ J(X, Y) = D_{\phi X} Y - \phi D_{\phi Y} X + \phi D_{\phi X} Y - \phi D_{\phi X} Y. \]  
Then
\[ J(X, Y) = -J(Y, X) = D_{\phi X} Y - \phi D_{\phi Y} X + \phi D_{\phi X} Y - \phi D_{\phi X} Y, \]  
(2.28a)

is Skew-Symmetric in X and Y. Barring equation (2.28a) throughout or different vector in it and using structure we get the equation (2.28a), (2.28b), (2.28c), (2.28d), (2.28e), (2.28f), (2.28g), (2.28h).

Again, subtracting equation (2.28h) from (2.28b), we get
\[ J(\phi X, \phi Y) = -a^{r} J(\phi Y, X) = -a^{r} J(\phi Y, X) = a^{r} N(X, Y), \]  
(2.29a)

i.e. J is hybrid X and Y.

\[ J(\phi X, Y) + J(X, \phi Y) = -J(\phi Y, X) + J(Y, \phi X) = N(\phi X, Y), \]  
(2.29b)

\[ \phi J(\phi X, \phi Y) - a^{r} \phi J(\phi Y, X) = -\phi J(\phi Y, X) - a^{r} \phi J(\phi Y, X) = a^{r} N(X, Y), \]  
(2.29c)

\[ \phi J(\phi X, Y) + \phi J(X, \phi Y) = -\phi J(\phi Y, X) + \phi J(Y, \phi X) = N(\phi X, Y). \]  
(2.29d)

**Proof:** Interchanging X and Y in equation (2.27), we get (2.28a). From equation (2.28a) it is clear that J is Skew-Symmetric in X and Y. Barring equation (2.28a) throughout or different vector in it and using structure we get the equation (2.28a), (2.28b), (2.28c), (2.28d), (2.28e), (2.28f), (2.28g), (2.28h).

Again, subtracting equation (2.28h) from (2.28b), we get
\[ J(\phi X, \phi Y) = -a^{r} J(\phi Y, X) = -a^{r} (-\phi J(\phi Y, X)) = a^{r} N(X, Y), \]  
(2.30)

Now, using equation (2.1e) in equation (2.30), we get the equation (2.29a), using the fact that N is pure in X and Y in equation (2.29a), we see that J is hybrid in X and Y. Similarly, we can prove the remaining equations.

**Theorem (1.7):** Let us put
\[ T(X, Y) = a^{r} D_{\phi Y} X - a^{r} D_{\phi Y} Y - \phi D_{\phi X} Y + \phi D_{\phi Y} X. \]  
(2.31)

Then
\[ T(X, Y) = -T(Y, X) = a^{r} D_{\phi Y} Y - a^{r} D_{\phi X} Y - \phi D_{\phi Y} X + \phi D_{\phi Y} X. \]  
(2.32)

is Skew-Symmetric in X and Y.

\[ T(\phi X, \phi Y) = -T(\phi Y, \phi X) = a^{r} D_{\phi Y} X - a^{r} D_{\phi Y} X + a^{r} D_{\phi Y} X - a^{r} D_{\phi Y} X, \]  
(2.33a)

\[ T(X, Y) = -T(Y, X) = a^{r} D_{\phi Y} X - a^{r} D_{\phi X} Y + a^{r} D_{\phi X} Y + D_{\phi Y} X, \]  
(2.33b)
\[
T(X,\phi Y) = -T(\phi Y, X) = a^r D_{\phi Y} X - a^r D_X \phi Y - \phi D_{\phi X} Y - a^r \phi D_X Y, \quad (2.33c)
\]
\[
a^r T(Y, X) = -a^r T(Y, X) = a^r D_Y X - a^r D_Y \phi X + a^r \phi D_Y X - a^r \phi D_X Y, \quad (2.33d)
\]
\[
\phi T(\phi X, \phi Y) = -\phi T(\phi Y, \phi X) = a^r \phi D_{\phi X} \phi Y - a^r \phi D_{\phi X} \phi Y + a^r D_{\phi X} \phi Y + a^r D_{\phi X} \phi Y, \quad (2.33e)
\]
\[
\phi T(Y, X) = -\phi T(Y, X) = a^r \phi D_Y \phi X - a^r \phi D_Y \phi Y - a^r D_Y \phi Y, \quad (2.33f)
\]
\[
\phi T(X, \phi Y) = -\phi T(X, \phi Y) = a^r \phi D_X \phi X - a^r \phi D_X \phi Y + a^r D_{\phi X} \phi Y + a^r D_{\phi X} \phi Y, \quad (2.33g)
\]
\[
a^r T(Y, X) = -a^r T(Y, X) = a^r D_Y \phi X - a^r D_Y \phi Y + a^r D_{\phi X} \phi Y - a^r D_{\phi X} \phi Y, \quad (2.33h)
\]

Consequently
\[
T(\phi X, \phi Y) - a^r T(X, Y) = -\{T(\phi Y, X) - a^r T(Y, X)\} = N(\phi X, \phi Y) = -a^r N(X, Y), \quad (2.34a)
\]
i.e. \( T \) is hybrid in \( X \) and \( Y \).
\[
T(\phi X, Y) = T(\phi Y, X) = \{T(X, \phi Y) - T(Y, \phi X)\} = N(\phi X, Y), \quad (2.34b)
\]
\[
\phi T(\phi X, \phi Y) + a^r \phi T(Y, X) = -\{\phi T(\phi Y, X) + a^r \phi T(Y, X)\} = \phi N(\phi X, \phi Y), \quad (2.34c)
\]
\[
\phi T(X, \phi Y) + \phi T(Y, \phi Y) = -\{\phi T(Y, \phi X) + \phi T(\phi X, Y)\} = \phi N(\phi X, \phi Y). \quad (2.34d)
\]

**Proof:** Interchanging \( X \) and \( Y \) in equation (2.31), we get (2.32). From equation (2.32) it is clear that \( T \) is Skew-Symmetric in \( X \) and \( Y \). Barring equation (2.32) throughout or different vector in it and using structure we get the equation (2.33a), (2.33b), (2.33c), (2.33d), (2.33e), (2.33f), (2.33g), (2.33h).

Again, subtracting equation (2.33d) from (2.33a), we get
\[
\phi T(\phi X, \phi Y) - a^r T(X, Y) = -\{\phi T(\phi Y, \phi X) - a^r T(Y, X)\}
\]
\[
= a^r D_Y \phi Y - a^r D_Y X - a^r D_{\phi X} \phi Y + a^r D_{\phi X} \phi Y + a^r D_X \phi Y - a^r D_{\phi Y} \phi X + a^r D_{\phi Y} \phi X - a^r D_Y \phi Y. \quad (2.35)
\]

Now, using equation (2.2e) in equation (2.35), we get the equation (2.34a), using the fact that \( N \) is pure in \( X \) and \( Y \) in equation (2.34a), we see that \( T \) is hybrid in \( X \) and \( Y \). Similarly, we can prove the remaining equations.

**Corollary (1.4):** We have in hyperbolic Hsu-structure manifold.
\[
J(\phi X, \phi Y) = a^r T(X, Y), \quad (2.36a)
\]
\[
a^r J(X, Y) = T(\phi Y, \phi X), \quad (2.36b)
\]
\[
J(\phi X, Y) = T(X, \phi Y), \quad (2.36c)
\]
\[
J(\phi X, Y) = T(X, \phi Y), \quad (2.36d)
\]
\[
J(\phi X, \phi Y) = a^r T(Y, X), \quad (2.36e)
\]
\[
a^r J(X, Y) = T(\phi X, \phi Y). \quad (2.36f)
\]

**Proof:** The statement follows from equations (2.28) and (2.33).

**Corollary (1.5):** We have in hyperbolic Hsu-structure manifold
\[
J(X, Y) + T(X, Y) = -\{J(Y, X) + T(Y, X)\} = N(X, Y), \quad (2.37a)
\]
\[
J(\phi X, \phi Y) + T(\phi X, \phi Y) = -\{J(\phi Y, X) + T(\phi Y, X)\} = N(\phi X, \phi Y), \quad (2.37b)
\]
\[
J(\phi X, Y) + T(\phi X, Y) = -\{J(Y, X) + T(Y, X)\} = N(\phi X, Y), \quad (2.37c)
\]
\[
J(\phi X, \phi Y) + T(\phi X, \phi Y) = -\{J(\phi Y, X) + T(\phi Y, X)\} = N(\phi X, \phi Y). \quad (2.37d)
\]

**Proof:** Adding equation (2.28) and (2.32), we have
\[
J(X, Y) + T(X, Y) = -\{J(Y, X) + T(Y, X)\}
\]
\[
= D_{\phi X} \phi Y - D_{\phi X} \phi X - a^r D_{\phi X} Y + a^r D_X Y + a^r D_{\phi X} Y - a^r D_{\phi X} Y + \phi D_{\phi X} \phi Y + \phi D_{\phi X} \phi Y.
\]

Now using equation (2.1b) in equation (2.38), we get equation the equation (2.37a). Similarly, we can prove the remaining equations.

The associate Nijenhius tensor \( N \) in Hyperbolic Hsu-structure manifold is given by
\[
'N(X, Y, Z) = a^r g(N(X, Y), Z) = -g(N(\phi X, \phi Y), Z), \quad (2.39)
\]
which satisfies the following properties.
\[
'N(X, Y, Z) = -N(Y, X, Z), \quad (2.40a)
\]
i.e. \( 'N \) is Skew-Symmetric in \( X \) and \( Y \).
\( N(\phi X, Y, Z) = 'N(X, \phi Y, Z) = 'N(X, Y, \phi Z), \) (2.40b)
\( N(\phi X, \phi Y, Z) = 'N(\phi X, Y, \phi Z) = 'N(X, \phi Y, \phi Z) = -a^{r}\n(2.40c)
\)
i.e. 'N' is pure in any two of three slots.

**Corollary (1.6):** Let us define
\( i^P(X, Y, Z) = g(P(X, Y), Z). \) (2.41)
Then
\( i^P(\phi X, \phi Y, Z) = -a^rP(X, Y, Z), \) (2.42a)
\( i^P(\phi X, Y, \phi Z) = i^P(X, \phi Y, \phi Z). \) (2.42b)
and
\( a^{r}P(X, Y, Z) - a^{r}P(Y, X, Z) = 'N(X, Y, Z), \) (2.43a)
\( a^{2r}P(X, Y, Z) = a^{r}P(X, \phi Y, \phi Z) = a^{r}N(X, Y, Z) = -'N(X, \phi Y, \phi Z). \) (2.43b)

**Proof:** Using equation (2.41) in equation (2.5b) and (2.5c), we get the equation (2.42a) and (2.42b). Again, using equations (2.39) and (2.41) in equations (2.6a) and (2.6b), we get the equation (2.43a) and (2.43b).

**Remark (1.1):** If \( a \neq 0 \), using the fact that 'N' is pure in Y and Z in equation (2.43b), we get
\( a^{r}P(X, Y, Z) = 'P(X, \phi Y, \phi Z), \) (2.44)
i.e. 'P' is hybrid in Y and Z.
from equations (2.42b) and (2.44), we get
\( i^P(\phi X, Y, \phi Z) = a^{r} 'P(X, Y, Z). \)
i.e. 'P' is hybrid in X and Z.

**Corollary (1.7):** Let us define
\( Q(X, Y, Z) = g(Q(X, Y), Z). \) (2.45)
Then
\( Q(\phi X, \phi Y, Z) = 'Q(\phi X, Y, \phi Z), \) (2.46a)
\( -'Q(X, \phi Y, \phi Z) = a^{r} 'Q(X, Y, Z). \) (2.46b)
i.e. 'Q' is pure in Y and Z.
and
\( a^{r}Q(\phi X, \phi Y, Z) - a^{2r}Q(X, Y, Z) = -'N(\phi X, \phi Y, Z) = -a^{r}N(X, Y, Z). \) (2.47)

**Proof:** Using equation (2.45) in equation (2.11a) and (2.11d) together with the fact that \( g(\phi X, Y) = -g(X, \phi Y), \)
we get the equations (2.46a) and (2.46b), from equation (2.46b) it is clear that 'Q' is pure in Y and Z. Using equations (2.39) and (2.45) in equations (2.12a), we get the equation (2.47).

**Remark (1.2):** If \( a \neq 0 \), using the fact that 'N' is pure in X and Z in equation (2.47), we get
\( a^{r}Q(\phi X, \phi Y, Z) = a^{r} 'Q(X, Y, Z), \) (2.48)
i.e. 'Q' is hybrid in X and Z.
from equations (2.46a) and (2.48), we get
\( Q(\phi X, \phi Y, Z) = a^{r} 'Q(X, Y, Z). \)
i.e. 'Q' is hybrid in X and Z.

**Corollary (1.8):** Let us define
\( M(X, Y, Z) = g(M(X, Y), Z). \) (2.49)
Then
\( M(\phi X, \phi Y, Z) = 'M(\phi X, Y, \phi Z), \) (2.50a)
\( -'M(X, \phi Y, \phi Z) = a^{r} 'M(X, Y, Z). \) (2.50b)
i.e. 'M is pure in Y and Z.
and
\[ a^T M(\phi X, \phi Y, Z) - a^{2r} M(X, Y, Z) = -'N(\phi X, \phi Y, Z) = -a^r N(X, Y, Z). \] (2.51)

**Proof:** The proof follows the pattern of the proof of the corollary (1.7).

**Remark (1.3):** If \( a \neq 0 \), using the fact that 'N is pure in X and Y in equation (2.51), we get
\[ 'M(\phi X, \phi Y, Z) = a^r M(X, Y, Z). \] (2.52)
i.e. 'M is hybrid in X and Y.

from equations (2.50a) and (2.52), we get
\[ 'M(\phi X, \phi Y, Z) = a^r 'M(X, Y, Z). \]
i.e. 'M is hybrid in X and Z.

**Corollary (1.9):** Let us define
\[ 'U(X, Y, Z) = g(U(X, Y), Z). \] (2.53)
Then
\[ 'U(\phi X, \phi Y, Z) = -a^r 'U(X, Y, Z), \] (2.54a)
i.e. 'U is pure in X and Y.
\[ 'U(\phi X, \phi Y, Z) = 'U(X, \phi Y, \phi Z). \] (2.54b)
and
\[ a^r 'U(X, Y, Z) - a^r 'U(Y, X, Z) = 'N(X, Y, Z), \] (2.55a)
\[ a^r 'U(X, \phi Y, \phi Z) + a^{2r} Q(Y, X, Z) = 'N(\phi X, \phi Y, Z). \] (2.55b)

**Proof:** Using equation (2.53) in equation (2.24a) and (2.24c) together with the fact that
\[ g(\phi X, Y) = -g(X, \phi Y), \]
we get the equations (2.54a) and (2.54b). Using equations (2.39) and (2.53) in equations (2.25a) and (2.25b), we get the equations (2.55a) and (2.55b).

**Corollary (1.9):** Let us define
\[ 'J(X, Y, Z) = g(J(X, Y), Z). \] (2.56)
Then
\[ 'J(X, Y, Z) = - a^r 'J(Y, X, Z), \] (2.57)
i.e. 'J is Skew-Symmetric in X and Y.
\[ 'J(\phi X, \phi Y, Z) - a^{2r} 'J(X, Y, Z) = 'N(\phi X, \phi Y, Z) = -a^r 'N(X, Y, Z), \] (2.58a)
and
\[ a^r 'J(\phi X, \phi Y, Z) + a^{2r} 'J(X, \phi Y, Z) = 'N(\phi X, \phi Y, Z), \] (2.58b)
\[ 'J(\phi X, \phi Y, Z) - a^r 'J(X, Y, Z) = -'N(X, \phi Y, Z), \] (2.58c)
\[ a^r 'J(X, \phi Y, \phi Z) + a^{2r} 'J(X, \phi Y, \phi Z) = 'N(X, \phi Y, \phi Z). \] (2.58d)

**Proof:** Using equation (2.56) in equation (2.28a), we get the equation (2.57a). From equation (2.57a), it is clear that 'J is Skew-structure in X and Y. Using equation (2.56) and (2.39) in equation (2.29) together with the fact that
\[ g(\phi X, Y) = -g(X, \phi Y), \]
we get the equations (2.58).

**Remark (1.4):** If \( a \neq 0 \), using the fact that 'N is pure in X and Y in equation (2.58a), we get
\[ 'J(\phi X, \phi Y, Z) = a^r 'J(X, Y, Z). \]
i.e. 'J is hybrid in X and Y.

**Corollary (1.11):** Let us define
\[ 'T(X, Y, Z) = g(T(X, Y), Z). \] (2.59)
Then
\[ a^r (\phi X, \phi Y, Z) - a^{2r} 'T(X, Y, Z) = 'N(\phi X, \phi Y, Z) = -a^r 'N(X, Y, Z), \] (2.60a)
Proof: Using equation (2.59) and (2.39) in equation (2.34) together with the fact that 
\( g(X, Y) = -g(Y, X) \), we get the equations (2.60).

Remark (1.5): If \( a \neq 0 \), using the fact that \( 'N \) is pure in \( X \) and \( Y \) in equation (2.60a), we get 
\( 'T(\phi X, \phi Y, Z) = a^2 'T(X, Y, Z) \),
i.e. \( 'T \) is hybrid in \( X \) and \( Y \).

Corollary (1.12): In hyperbolic Hsu-structure manifold the associate Nijenhius tensor \( 'N(X, Y, Z) \) can be put in the form:
\[
\begin{align*}
a^\alpha 'M(X, Y, Z) + a^\alpha 'Q(X, Y, Z) &= 'N(X, Y, Z), \\
'M(\phi X, \phi Y, Z) + 'Q(\phi X, \phi Y, Z) &= -'N(X, Y, Z), \\
a^\alpha 'J(X, Y, Z) + a^\alpha 'T(X, Y, Z) &= 'N(X, Y, Z), \\
'J(\phi X, \phi Y, Z) + 'T(\phi X, \phi Y, Z) &= -'N(X, Y, Z),
\end{align*}
\]

Proof: Using equation (2.39), (2.45), (2.49), (2.56) and (2.59) in equations (2.20a), (2.20b), (2.37a), and (2.37b), we get equations (2.61).

REFERENCES
