Importance and Scope

Good nutrition is an important part of leading a healthy lifestyle. Combined with physical activity, your diet can help you to reach and maintain a healthy weight, reduce your risk of chronic diseases (like heart disease and cancer), and promote your overall health. Nutrition is the study of nutrients in food, how the body uses nutrients, and the relationship between diet, health, and disease. Major food manufacturers employ nutritionists and food scientists. Nutritionists may also work in journalism, education, and research.

They assess, diagnose and treat nutritional problems of the individuals. A Registered Dietitian (RD) or <u>Registered Dietitian Nutritionist</u> (RDN) is a certified professional which prescribes a healthy diet plan and lifestyle changes to its patients. The RDNs, aspirants hold graduate degrees.

As the <u>obesity</u> epidemic increases, primary care clinicians are encountering obesity and health problems associated with obesity more frequently than ever before. In 2007, 41% of women were classified as obese, with a body mass index (BMI) of 30 or higher. Non-Hispanic blacks and Hispanics are more likely to be obese than white, non-Hispanics. A wide spectrum of health problems has been associated with obesity, including cardiovascular disease, diabetes, metabolic syndrome, osteoarthritis, and polycystic ovary syndrome. Obesity has been shown to be a low-grade inflammatory state, which may be responsible for many of the comorbidities. The general consensus recommends screening for obesity and counselling to promote weight loss. In some cases, pharmacotherapy and or bariatric surgery may be recommended.
