

Happiness and Its Relationship with University Students' Demographic Factors

Alma Karimi

University of Pennsylvania, Iran

Abstract:

Here, we examined happiness and its relationship with university students' demographic variables in Khorasan Azad University. Our study which used a correlation descriptive method drew a sample of 100 among from 2000 individuals that had been selected through random cluster sampling using Krejcie and Morgan table in order to determine the sample size. The results which had been gathered by Oxford Happiness Questionnaire were analyzed using ANOVA and t -test for the independent group. Findings support significant difference between people with different age ranges; however, there exist no significant difference between single and married individuals, female and male individuals belonging to various ethnic groups and religious background, and students of different majors.
